

## AOS “Spray” Thermal Compound

Directions for use with the Preval Spray Gun:

<http://www.prevalspraygun.com/about.htm>

- 1) The Preval Spray Gun can be found at Home Depot and other hardware stores, or online.
- 2) Follow instructions according to the Preval Spray Gun literature.
- 3) In the container jar, mix 80% thermal grease to 20% diluent (hexane is the best choice) Add one agitator marble, reseal the jar lid, and shake well.
- 4) Remove the lid and replace with the power unit (make sure that the dip tube is attached to the power unit).
- 5) Before aiming at the desired target, spray once or twice into a rag or piece of paper to make sure the unit is primed and working properly.
- 6) Power units can be purchased separately so the jars can be reused.

Notes:

- Keep the power unit in motion but do not vigorously shake. If not in continual use, remove the power unit, replace the jar lid, shake well, then replace the power unit.
- Additional instructions can be found on the Preval web site and product packaging.
- AOS is not responsible for defective spray guns
- If spraying a bigger surface area, larger paint spraying equipment can be used.
- Use the same dilution ratio and follow equipment instructions.
